DENIS DENCHEV

SOFTWARE DEVELOPER

PROFILE

As a curious and enthusiastic individual my love for technologies started from young age. I enjoyed using technologies and exploring the opportunities they provide us. My desire to learn and explore even further the world of technologies has led me to an intensive self-funded course with _nology. I am now looking for new challenges within the tech industry so I can build on the skills I have learned on the course. I am ready to bring value to a company that would take me onboard and allow me to continue learning new tech.

EXPERIENCE

GATEMAN/LABOURER AT RYDON
JUN 2019 - JAN 2020

As a gateman/labourer I had to accept deliveries in and record every vehile or person that comes onto the site. I had to take visitors to the main site office. I was responsible for health and safety of people around the construction site and I had to do daily checks in order to prevent accidents happening. I was making sure the traffic flow was going perfectly and no one was in danger. My other duties were to lift and shift materials and do light jobs as assigned by the site managers.

ASSISTANT MANAGER AT RAIL-GOURMET
NOV 2017 - JUNN 20219

As an assistant manager I was involved in every aspect of our business. I was responsible for 30+ staff, a lot of stock and banking. I was doing ordering of stock, stock handling, stock counts and stock takes. I was dealing with rotas and kronos. I was also doing investigations, disciplinaries and meetings. I had to ensure the work flow goes perfect, as if there was an issue our company would've lost money or an accident might have happened. I had to do daily checks and ensure emergency systems were in good condition.

JUNIOR SOFTWARE DEVELOPER
JAN 2020 - APRIL 2020

I have spend 12 weeks at _nology, self-funded and very intensive course, which put me through a lot of effort, so I can understand what the life of real developer looks like. Learning new content and solving problems on a daily basis become a second nature. The skills I got from the course taught me how to work in a dev team. I can work really well in pair programming and on my own. I know when to raise an issue and when to ask for help, work smart, not hard! I enjoyed building web applications and adding new features to it, perfection was never achieved, as there is always something to work on. Working on a client project also helped to develop myself and provide me with the opportunity to apply the soft-skills we've learned throughout the course. Communication and organising are top priorities.

SKILLS

- HTML5
- SCSS/SASS
- JavaScript
- Routing
- ReactJSX
- Git/GitHub Flow
- Yarn/NPM
- Bootstrap
- Object-oriented Programming
- Agile/SCRUM/KanBan
- Remote Working
- Pair Programming
- Functional Programming
- Unit Testing
- Firebase/ Hosting/ Authentication

HAD EXPOSURE TO

- Postman/API
- Jest
- Enzyme
- TDD
